

Secret Message Decoder Wheel!

Come join the fun!
 Cut both circles out on the outside line. Place circle 1 on top of circle 2. Push a brad through the center dots to hold them together.

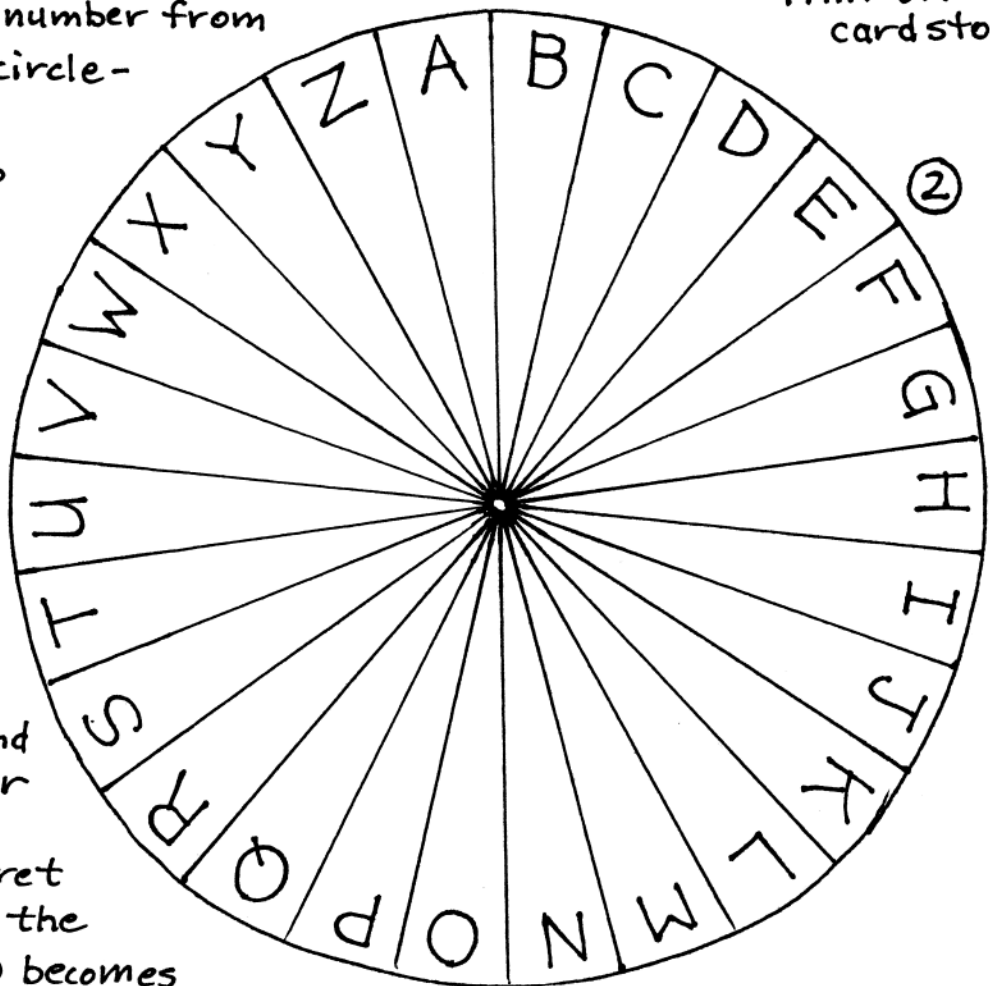

To make your secret code, choose a letter from the larger circle and a number from the smaller circle - like F-21.

Line them up and then write your secret message by using the letters on the smaller circle for each letter in your message found on the larger circle.

So with secret code F-21, the word HELLO becomes AXEEH. Decode the message by using the same F-21 secret code.

Print on cardstock.
